

Amanda Neves

Principal Product Designer

Seattle, WA • amandan@outlook.com • [linkedin.com/in/amanda-neves-038113](https://www.linkedin.com/in/amanda-neves-038113)

SUMMARY

Principal Product Designer with **25+ years at Microsoft**, leading UX for agentic security and AI experiences across Microsoft Security, enterprise device management, and **Windows 365 / Cloud PC**. Drives design direction from early concept through Public Preview, establishes reusable patterns adopted across teams, and aligns design, PM, engineering, and research toward coherent product experiences.

CORE SKILLS

AI / Agentic UX • Enterprise & Admin UX • Windows 365 / Cloud PC • Design Systems & Reusable Patterns • Interaction Design • Information Architecture • AI-first Prototyping (VS Code + GitHub Copilot) • Accessibility • RBAC • Copilot for Security • Cross-functional Leadership & Mentoring • Figma

EXPERIENCE

Microsoft — Redmond, WA

2000 – 2026

Principal Product Designer, Microsoft Intune

2024 – 2026

- **Leading UX for agentic security experiences across Microsoft Security** — extending agent-session and playbook patterns across first-party security products, with human-in-the-loop approval for high-impact actions. *(Current work; details pre-release.)*
- **Delivered four strategic Intune Agents to Public Preview** on schedule for **Ignite 2025** (under embargo) — leading end-to-end design for the Vulnerability Remediation and Policy Configuration agents, and design strategy for Change Review and Device Offboarding; named in the official UX/Design launch credits.
- Designed reusable agent interaction patterns — framework toolbars, suggestion details, remediation-plan generation, and approval/execution flows — and **championed a dedicated Agent section in the Intune Design Toolkit**, giving teams reusable components adopted across the product.
- Delivered **Natural Language → KQL (NL2KQL) Copilot** designs, **approved for Private Preview**.
- Created UX for **CVE / vulnerability remediation agents**, including remediation suggestions, reasoning views, approvals, and task-based execution tracking — an early preview customer collapsed a **two-week remediation cycle to under two minutes**.
- Defined foundational **AI governance patterns** — permission models, trust, reporting/monitoring, and agent administration for AI-first management.
- Adopted an **AI-first way of working** — built interactive chat and custom reporting prototypes in VS Code with GitHub Copilot that shaped Intune's AI narrative.
- Served as **org-wide design lead and team multiplier**: guided the broader design team through reviews and critiques, mentored designers, enabled smooth design-ownership handoffs, and drove cross-discipline alignment across design, PM, engineering, research, and content.

Senior Product Designer, Windows 365 / Cloud PC & Intune

2019 – 2024

- **Design lead for the Intune-based Cloud PC / Windows 365 admin experiences** for ~3.5 years — provisioning, onboarding, management, health, and troubleshooting — from the early pre-launch phase forward.
- **Design Owner for Windows 365 Frontline / Flex** (shared, partial-use Cloud PCs); designed provisioning, management, and reporting, shipped to **Private Preview**.
- Simplified **first-time Cloud PC setup with guided scenarios**, reducing required objects and assignments and preventing common configuration errors.

- Designed the **Windows 365 health dashboard** in Endpoint analytics (connection quality, latency, crashes, health scoring) and Cloud PC reporting.
- Led a **research-backed IA change** — “Windows 365” → “Cloud PC creation” with a new Device Onboarding section — resolving documented admin confusion between Windows 365 / Microsoft 365 / Office 365.
- Owned **Boot to Cloud PC on Windows Pro** UX; Windows 365 Boot & Switch V2 **shipped to Public Preview** (Jan 2024) with design credit.
- Enabled **bulk device actions with batching** and finalized the **properties catalog** designs for Intune management scenarios.

Design roles of increasing scope, Microsoft

2000 – 2019

- Progressed across product design roles spanning commercial and management experiences, building deep expertise in enterprise UX, design systems, and accessibility.

SELECTED IMPACT

- **Platform influence:** shaped reusable agent patterns and frameworks used by multiple teams rather than isolated features.
- **Customer & press reach:** led the Intune agent demo for the **first public showcase of Security Copilot Agents to the press** (RSA), demoed to **50+ customers**, and took the Vulnerability Remediation Agent from idea to functional agent in under four months.
- **Shipped to Public Preview:** delivered four strategic Intune agents to Public Preview on schedule for Ignite 2025, under embargo.
- **Formal design credit:** named in the official UX/Design launch rosters for the Vulnerability Remediation Agent, Change Review Agent, the Ignite 2025 Intune Agents launch, and Windows 365 Boot & Switch V2.
- **Preview milestone:** NL2KQL Copilot designs approved for Private Preview.
- **New-product foundations:** owned admin UX for Windows 365 / Cloud PC from pre-launch through provisioning, health, and Frontline/Flex shared Cloud PCs.

RECOGNITION

- “Your tenacity and commitment were the only reason that work was delivered at all.” — Principal Product Design Manager, on the Intune agent launch (2025)
- “Your leadership in laying the foundational design for IRG was nothing short of masterful... you navigate ambiguity with grace.” — Senior Product Designer (2025)
- Recognized by manager as “**a true multiplier**” who “**moved from feature-level design to system-level influence.**” Named in official UX/Design launch credits across four shipped releases.
